

Test 3: Understanding Web Development Concepts

Question 1: Creating Web Pages with Django

Create 5 web pages using Django's `HttpResponse`. Each page should contain a unique message. Map these pages to different URLs in the Django application.

Question 2: Request Processing by Django

Explain the process of an HTTP request being processed by Django, mentioning the file names involved in the process.

Question 3: Difference Between Static and Dynamic Web Pages

Differentiate between static web pages and dynamic web pages in terms of content generation and interactivity.

Question 4: Role of views.py

Describe the role of the `views.py` file in a Django application.

Question 5: Role of apps urls.py

Describe the role of the `urls.py` file within an app in a Django project

Submission:

- Submit your completed question paper along with the PDF document containing screenshots of the HTML pages.
- Submit your PDF document before 10 pm by attaching it to your submission in Whatsapp Gruop.
